

## **TESTIMONIALS**

Geo Earth Mapping provided GIS mapping services for the Grasslands Conservation Council in 2014-15 for a grasslands mapping project involving 4 different regions of the province. There was a large volume of information that required processing and maps produced within very tight time lines. We found Geo Earth Mapping to be very responsive to our timelines, the quality of service and product received were excellent, and staff were professional from start to finish. All deliverables were received on time and the project came in under the forecast budget. We will definitely use Geo Earth Mapping for future projects requiring GIS services. If you wish to contact the Grasslands Conservation Council of BC for further information we can be reached at [gcc@bcgrasslands.org](mailto:gcc@bcgrasslands.org) or 250-655-4103.

*Scott Benton, Executive Director of Grasslands Conservation Council of BC, Victoria, BC*

Geo Earth Mapping has provided GIS analysis and cartographic services to WWAL on over a dozen projects ranging from simple mapping exercises to more complex GIS applications such as groundwater level contouring, watershed delineation and data analysis. We have always found Geo Earth Mapping to be professional, timely and knowledgeable. Geo Earth Mapping has been a key contributor to the successful delivery of many of our projects.

*Ryan Rhodes, P.Geo. Vice-President / Hydrogeologist of Western Water Associates Ltd.*

I want to thank you and your organization for allowing me to include your material in my book, Empowering Electric and Gas Utilities with GIS. Your work is terrific. I'm always so impressed with what you have been able to do with GIS. You and your work will continue to promote the vision of GIS as an enabling technology for significant improvement in nearly all facets of the utility business. GIS will play a strong role, perhaps even a pivotal role in helping utilities meet the challenges facing them.

*Bill Meehan, P.E. Director, Utility Solutions, ESRI, Redlands CA*

We have used Geographic Earth Mapping services several times to provide maps for areas covered by our Info Tel Directory Distribution. Ms Decker was not only very accommodating but also was able to provide ideas that proved to be more viable than what we had envisioned. Her maps provided the detail we wanted and she was able to provide them on time after being given very short notice. Furthermore, Ms Decker provided regular progress updates, giving me one less thing to be concerned with in planning our distributions. I have no hesitation in recommending Geographic Earth Mapping given Ms Decker's technical expertise and her geographic knowledge of the Okanagan.

*Bruce Anderson, Distribution Mgr. Info Tel Multimedia, Vernon, BC*

Geographic Earth Mapping provided AutoCAD drafting services on various engineering projects at Golder Associates. Drawings were of a high quality and designed to meet our standard formats. We found Ms. Decker to be very reliable and able to respond to many short-notice requests.
